## Safety Information

### About Photosensitive Seizures

A very small percentage of people may experience a seizure when exposed to certain visual images, including flashing lights or patterns that may appear in video games. Even people who have no history of seizures or epilepsy may have an undiagnosed condition that can cause these "photosensitive epileptic seizures" while watching video games.

These seizures may have a variety of symptoms, including lightheadedness, altered vision, eye or face twitching, jerking or shaking of arms or legs, disorientation, confusion, or momentary loss of awareness. Seizures may also cause loss of consciousness or convulsions that can lead to injury from falling down or striking nearby objects.

Immediately stop playing and consult a doctor if you experience any of these symptoms. Parents should watch for or ask their children about the above symptoms—children and teenagers are more likely than adults to experience these seizures.

The risk of photosensitive epileptic seizures may be reduced by sitting farther from the television screen, using a smaller television screen, playing in a well-lit room, and not playing when you are drowsy or fatigued.

If you or any of your relatives have a history of seizures or epilepsy, consult a doctor before playing.

**Other Important Health and Safety Information** The Xbox Instruction Manual contains important health and safety information that you should read and understand before using this software.

### Avoid Damage to Your Television

**Do not use with certain televisions.** Some televisions, especially front- or rear- projection types, can be damaged if any video games, including Xbox games, are played on them. Static images presented during the normal course of gameplay may "burn in" to the screen, causing a permanent shadow of the static image to appear at all times, even when video games are not being played. Similar damage may occur from static images created when placing a video game on hold or pause. Consult your television owner's manual to determine if video games can be played safely on your set. If you are unable to find this information in the owner's manual, contact your television dealer or the manufacturer to determine if video games can be played safely on your set.

Unauthorized copying, reverse engineering, transmission, public performance, rental, pay for play, or circumvention of copy protection is strictly prohibited.

## INTRODUCTION

Taito Corporation pioneered coin-operated arcade games and created the computer games industry we know today. From the revolutionary and seminal *Space Invaders* in 1978, through *Bubble Bobble* and *Rainbow Islands*, not forgetting classics such as *The New Zealand Story* and *Operation Wolf*, hit after hit has made Taito one of the leading coin-op manufacturers and developers of the past 25 years.

Taito Legends offers arcade-perfect versions of an unprecedented selection of titles from the Taito stable. This is the strongest and most varied collection of arcade games ever assembled on Xbox Video Game System.

This isn't just a collection of classic games: it's a little piece of gaming history!
